- White County: 1 male 80s
- Will County: 2 males 70s, 1 female 80s, 2 females 90s
- Winnebago County: 1 female 70s

Currently, IDPH is reporting a total of 402,401 cases, including 9,711 deaths, in 102 counties in Illinois. The age of cases ranges from younger than one to older than 100 years. Within the past 24 hours, laboratories have reported 95,111 specimens for a total 7,637,209. As of last night, 3,092 people in Illinois were reported to be in the hospital with COVID-19. Of those, 673 patients were in the ICU and 288 patients with COVID-19 were on ventilators.

The preliminary seven-day statewide positivity for cases as a percent of total test from October 23 – October 29 is 7.3%. This is the number that IDPH has been consistently reporting in its daily releases and is calculated using total cases over total tests. Similar to the Centers for Disease Control and Prevention, IDPH has been using test positivity for regional mitigation metrics on its website since mid-July. Test positivity is calculated using the number of COVID-19 positive tests over total tests. On October 29, 2020, IDPH began reporting the statewide test positivity in its daily releases. The preliminary seven-day statewide test positivity from October 23, 2020 – October 29, 2020 is 8.5%.

Case positivity and test positivity rate are both relevant and offer insight into the bigger COVID-19 picture. Case positivity helps us understand whether changes in the number of confirmed cases is due to more testing or due to more infections. Whereas, test positivity accounts for repeated testing and helps us understand how the virus is spreading in the population over time.
