

## Public Health Officials Announce 6,222 New Confirmed Cases of Coronavirus Disease

November 2 2020 12:59 PM

**SPRINGFIELD** – The Illinois Department of Public Health (IDPH) today reported 6,222 new confirmed cases of coronavirus disease (COVID-19) in Illinois, including 20 additional deaths.

- Champaign County: 1 male 60s
- Cook County: 1 female 50s, 1 female 60s, 1 male 60s, 2 females 70s, 2 males 70s, 2 males 80s, 1 female 0ver 100
- DuPage County: 1 male 80s
- Iroquois County: 1 male 80s
- Lake County: 1 male 80s
- Mason County: 1 male 70s, 1 male 90s

- Monroe County: 1 female 90s, 1 female over 100
- Piatt County: 1 female 60s
- Will County: 1 male 90s

Currently, IDPH is reporting a total of 423,502 cases, including 9,810 deaths, in 102 counties in Illinois. The age of cases ranges from younger than one to older than 100 years. Within the past 24 hours, laboratories have reported 68,118 specimens for a total 7,876,421. As of last night, 3,371 people in Illinois were reported to be in the hospital with COVID-19. Of those, 722 patients were in the ICU and 298 patients with COVID-19 were on ventilators.

The preliminary seven-day statewide positivity for cases as a percent of total test from October 26 – November 1 is 8.1%. This is the number that IDPH has been consistently reporting in its daily releases and is calculated using total cases over total tests. Similar to the Centers for Disease Control and Prevention, IDPH has been using test positivity for regional mitigation metrics on its website since mid-July. Test positivity is calculated using the number of COVID-19 positive tests over total tests. On October 29, 2020, IDPH began reporting the statewide test positivity in its daily releases. The preliminary seven-day statewide test positivity from October 26, 2020 – November 1, 2020 is 9.7%.

Case positivity and test positivity rate are both relevant and offer insight into the bigger COVID-19 picture. Case positivity helps us understand whether changes in the number of confirmed cases is due to more testing or due to more infections. Whereas, test positivity accounts for repeated testing and helps us understand how the virus is spreading in the population over time.

\*All data are provisional and will change. In order to rapidly report COVID-19 information to the public, data are being reported in real-time. Information is constantly being entered into an electronic system and the number of cases and deaths can change as additional information is gathered.
